Precision with an extra small head.

endea

Contra-angle handpieces specially for nickel-titanium files

Versatile, precise and practical.

The Endea contra-angles guarantee the best possible access to the treatment site and have been specially designed for efficient working with highly elastic nickel-titanium files. Whether using an electric, an air or a torque-controlled motor, the Endea contra-angle EB-75 (16:1) enables all commercially available files to reach the required speeds.

Extremely small head for better access

to the treatment site. A shorter file shank reduces the total working height and access to posterior areas is facilitated.

All advantages at a glance

- › Small head for best possible access to the treatment site
- › Hygienically perfect, easy to use with non-slip handle
- › Fully ball bearing mounted for precise transmission of speed to the file
- › Thermo washer disinfectable and sterilizable

Precise, fast and efficient preparation

of the root canal with 360° rotation.

Technical data

Type:	EB-75	EB-79
Transmission ratio:	16:1	2:1
Recommended root canal instrument's according to EN ISO 1797-1:1995:	Nickel-titanium files, suitable for 360° rotation, shaft diameter 2.35 mm (type 1)	
Connection diameter:	20 mm	
Coupling system:	Motors with ISO connection according to ISO 3964 (DIN 13.940)
